Whirlpool fridge replacement glass shelf

A glass door panel combines the security of a lockable door with the outdoor views offered by a window. Unfortunately, these panels are damaged easily, and you might eventually find yourself in need of a replacement. You can either hire a professional to help or attempt to do it yourself. Gather Your Tools Whether you're removing glass or plastic panels for doors, you'll need several tools. Grab a utility knife, hammer, nails, painter's tape and sealant. A pair of gloves and safety glasses are also needed to protect yourself some glass and splinters. You should also have the replacement glass ready. If you haven't bought a new glass panel already, make sure you measure the width and length of the previous panel so you can find the right size replacement at a local hardware store. Removing the Old Panel If the panel was broken, use painter's tape to stabilize the remaining glass so that you don't cut yourself on falling shards. Remove the wooden stops using a utility knife carefully. Keep track of which piece of wood goes to which side of the frame. You can label them if needed. Remove the glass panel and move it from your work area so that it doesn't remain a hazard. Clear out any old compound that's still in the now vacant window space. You should be able to scrap most of it out with the utility knife. Insert the New Glass Insert the new glass in the window. Ask a friend to hold it steady as you move onto the next step. If you're working alone, stabilize it using painter's tape. Apply your sealing compound around the window opening and push the glass into it gently until it's secure. Securing the New Glass Put the wooden stops back into place and use nails to hold them in place. These wooden pieces are often thin and fragile, so handle them with care. If one happens to break, you'll need to take your window measurements back to the store to buy a new one. Finally, add sealant to the frame, and then scrape off any extra sealant carefully for a neat finished look. Touch-Ups Although this step isn't always necessary, you might want to consider repainting the frame if any of the original paint was cracked or scraped off during the glass door panel replacement process. Make sure the paint you buy matches well with the remaining color. To do this, extract a small sample of the paint off the door and take it with you to the hardware store. This gives you a reference to help find the most similar shade available. MORE FROM QUESTIONSANSWERED.NET Knowing how to do a few simple household repairs can extend the life of your appliances while saving you money. Today, we are going to teach you the simple steps that you need to know to replace the dispenser micro switch on your refrigerator. At first glance, this may seem as if it is a complicated repair; however, with our help you can quickly replace your micro-switch with only a few common household tools. • New Micro-switch • Small flat-blade screwdriver • Putty knife • Duct tape Anytime you are working with electrical currents, it is important to disconnect the appliance from the power source to ensure the safety of everyone in your workspace. Before you get started, simply pull the plug. Now, you are ready to begin. With the power off, you will first begin your repair by removing the drip tray located at the bottom of the dispenser. To protect the finish, you may wrap the putty knife using a layer of duct tape. Then, place your putty knife just beneath the escutcheon and use a pull-down and out motion to remove it from its spot. As you do so, you will notice it is attached with several spots on the bottom and hooks at the top. Therefore, you will need to start at the bottom and tilt it up before pulling it out. Once you have removed the drip tray, you will be able to see the five-pin plug that provides power to the switches. Simply disconnect this plug and set it to the side before moving forward. With the drip tray and plug out of the way, you now have access to the micro-switches. You will notice they are being held in place by plastic tabs that have a hook on the end. Begin by pulling that hook off of the switch. Then, wiggle it over to the side. After removing it from the posts on which it is mounted, you will be able to pull it out. Use your flat-blade screwdriver to pry off the wire connector. Then, you can throw away the old switch. Working in reverse of the previous steps, you will then take your new switch and slide on the wire connector. When doing so, make sure it has a nice and tight fit. Then, carefully rotate that into position while making sure to line up the two diagonal holes located on the switch with the two plastic posts. Next, push it over so that you engage the locking caps. Finally, make sure to tuck all of the wires out of the way. With the new micro-switch in place, you can now reconnect the harness connector. Start by making sure the locking tab engages with that and slide it in just beneath the handle. Next, lift it up so that it is just above the dispenser housing. Tap it while pushing on the bottom to lock it in place. Now that you have successfully installed your micro-switch and connected the power, you are ready to replace the drip tray and plug it in to its power source. If you need a new micro switch when your refrigerator's water dispenser or ice maker stops working check out, . Refine Selection Here: Item # 4922236 Grid is 1 inch square Order by 8:00 PM ET, this part ships TODAY! Quantity: Add to Cart If all or a portion of the glass in your door is cracked, broken or in overall poor condition, you can transform the look of the door by ordering and installing replacement glass inserts. Here's what you need to know about purchasing replacement glass inserts for your door. Consider What Features You Want From the Glass Insert Before you can start shopping for glass door inserts, you need to decide what kind of glass you prefer. Consider your needs. Perhaps you're looking for replacement glass that's energy-efficient to lower your heating and cooling bills. Or, maybe you're interested in the decorative aspects of the insert. If you have concerns that the glass will be easily broken, durability may be a top priority. Know Your Glass Alternatives You can choose from multiple inserts that offer various types of glass. The best type of glass depends on your needs for the insert, your preferences and your budget. Tempered glass is a type of glass that will break into small fragments when broken. If you live in an area with severe weather, this is a good option due to the material's additional strength and the lack of sharp glass fragments if breakage occurs. Insulated glass has two layers of glass with a layer of gas in between. The function of the gas is to make the glass more insulating. It's a top option if an energy-efficient home is your priority. Finally, decorative glass inserts with some type of design or pattern are a terrific way to improve the aesthetics of your door. Decide If You Want to Install the Insert Yourself It's possible to install the glass insert yourself if you have the time and tools. You'll need the manpower to remove the door from its hinges. Once it's off the hinges, you'll remove the molding and any remaining glass before inserting and caulking the new glass. When installing the glass yourself, you can buy the replacement glass from a home improvement store or glass replacement store. You may prefer to hire a contractor to install the door insert for you. If so, see if the contractor will purchase the insert on your behalf, or if you need to buy it yourself. Some contractors may wish to purchase the insert themselves so that they know it is suitable for your door. Take Measurements One last detail that you need before you buy a glass door insert is the measurements of the insert space on the door. Make sure to measure the length, width and depth of the insert area. Check Online and at Brick-and-Mortar Retailers Now that you have all the info for your new glass door insert, it's time to browse potential options. You can find inserts at brick-and-mortar stores by visiting shops that sell glass replacement supplies and home improvement materials. It's also possible that you can have the shop special order an insert for you if you don't find a piece that meets your needs. Shopping online is another way to check out potential inserts. Just double-check the measurements so that you know it will work for your door.
